

PRESS RELEASE

Geberit Australia, July 2010

The Geberit Monolith WC Module combines elegance and functionality

European leader in bathroom and piping solutions, Geberit sets a new, stylish trend in the bathroom: Geberit's Monolith WC Module, the innovative WC module for toilets with integrated cisterns, boasts an impressive award-winning design, easy installation and top-end materials.

Trend-setting, award-winning design

The Geberit Monolith WC Module offers the latest in innovative sanitary modules and a radically new toilet design. An elegant alternative to toilets with a visible cistern, the stylish Geberit Monolith brings harmony to bathroom fixtures: the slim line structure ingeniously conceals the cistern behind a premium-quality glass panel. The clean, contemporary lines of the Geberit Monolith WC Module are sure to satisfy even the most discerning tastes. This trend-setting design has already brought the new WC module international recognition: this year it won the renowned iF product design award, as well as other design awards at international trade fairs.

Easy to install, no structural alterations

The Geberit Monolith WC Module provides modern toilet design without the need for structural alterations. It can be installed easily, quickly and cleanly. Geberit's Monolith WC Module can be connected to the existing water supply and waste water connections usually without altering the structure of the building – so toilets with cisterns fitted in front of the wall can be modernised in just a few steps. It is therefore an ideal alternative for renovation projects, as well as new builds. The Geberit Monolith is compatible with most floor-standing WC ceramics to ensure maximum flexibility.

Top-end materials set new trends

The design of Geberit's Monolith is complimented by the top-end, low-maintenance materials used. Available in the three classical glass colours of black, white and mint, the slim line WC module matches any environment. The materials used – safety glass for the front panel and brushed aluminium or ASA for the side panels and lid – emphasise its clean lines and ensure longevity.
